

# SAW-Greenland Joint Venture Successful in Boiler Plant Project Bid

| December 21, 2018

A Joint Venture between Greenland Enterprises and SAW Contracting has been awarded a \$16.5M project to replace three boilers at the Malcom Randall VA Medical Center in Gainesville, FL. The combination of each company's experience and expertise ultimately created the best offering for the Department of Veterans Affairs in awarding this project.

The project involves building a new boiler plant and replacing three water tube boilers with three fire tube boilers, along with new controls and related systems. The boilers provide steam for the medical center campus, and a critical element of the project is keeping the existing boiler plant online during construction and commissioning. Once the new plant is online, the SAW-Greenland team will dismantle and remove the old boilers and related equipment.
